## **DETAILED ACTION**

### ***Allowable Subject Matter***

Claims 1 – 44 are allowed.

The following is an examiner's statement of reasons for allowance:

When considered with all of the other limitations, the prior art of record does not teach or suggest a data processing apparatus that comprises a holding register for holding prefetched/preloaded data and an associated identifier where the register is conditionally loaded in response to a preload instruction that causes the memory system to be located in the memory system and where in response to a load instruction the requested data is provided from the register without issuing a memory access request to the memory system in the manner claimed.

In a conventional prefetching system, prefetched data and the identifier associated with the prefetched data are typically loaded into a cache, which is part of the memory system, and data access requests are serviced from the cache.

Anderson et al. (US Patent Application Publication No. 2003/0018857) disclose a system that prefetches data into a prefetch buffer. However, unlike the instant invention, Anderson's prefetch system copies the prefetched data requested by load instruction to the cache and the request is serviced from the cache.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
